Technology

TARPOS
SafetyTechnology

TARPOS - SafetyTechnology: the three-layer tarpaulin for certified transport conforming to EN 12642 code XL

Safety

- High strength fabric with 12 x 12 threads per cm².
- Sealing belt straps on the inside provide improved traction and permit EN 12642 code XL certification.
- Tarpaulin can optionally be equipped with theft protection.
- Optimally tensioned tarpaulins ensure minimum billowing of the tarpaulins: improved view for the driver in the rear view mirrors.

Handling

- Improved temperature resistance and higher flexibility of the tarpaulin in the cold due to three-layer material structure.
- Much simpler operation due to ball-bearing mounting runners.
- Opening and closing of the tarpaulin in less than 2 minutes is possible.
- Efficient loading and unloading due to displaceable stanchions.

Efficiency

- Improved impact resistance and 100 % improved tear strength of the tarpaulin structure: prevents further tearing because of special web technology and therefore reduces repair costs.
- Higher loading strength due to 30 % higher tensile strength.
- Reduced air resistance due to tightly tensioned tarpaulins results in fuel savings.
